Application for Professor of Information Technology

Dear Committee Members,

As a former chemistry professor with a passion for programming, I am writing to express my keen interest in the professorship in Information Technology with a focus on “Web Applications and Software Development” at your Berlin campus.

Driven by a lifelong curiosity, an analytical mind, a desire to express my creativity, and a love for structured problem-solving, I recently transitioned into software development. I am currently completing an intensive 18-month full-stack web development program at the Digital Career Institute in Berlin.

My **portfolio** includes React-based applications, Express/MongoDB APIs, and full-stack tools developed with a strong focus on usability, maintainability, and clean code. In my final team project (a real-time multi-user app with secure authentication) I served as lead developer, system architect, and mentor for my peers.

What excites me about Mediadesign University is the synergy between innovation, design, and education. I had the pleasure of visiting your Open Campus Day, where I experienced firsthand your team’s openness to unconventional profiles and future-facing teaching. Your academic culture encouraged me to imagine myself contributing not only as a professor but also as a mentor, project supervisor, and collaborator in curriculum development.

I bring a unique combination of academic depth, technical fluency, and a passion for both the subject and mentoring. At Mediadesign Hochschule, I aim to help students create real-world applications while building strong theoretical foundations.

I look forward to continuing this conversation in person – to explore where my background and your vision for the program meet and grow together.

Thank you for considering my application.

Warm regards,

Dr. Marga Lensen
